Professional Summary

Computer Science undergraduate (expected June 2027) focused on full-stack development with C#, ASP.NET Core, Angular and SQL Server. Built project-based web applications covering REST API development, JWT authentication, role-based access control, database integration and responsive user interfaces. Also developing AI-enabled features using retrieval-augmented generation (RAG), vector search and LLM integration. Seeking a junior or associate software engineering opportunity

Technical Skills

Languages: C#, TypeScript, JavaScript, SQL, C++, HTML5, CSS3, and T-SQL (SQL Server).

Frontend: Angular, Angular Material, Bootstrap, Tailwind CSS, Responsive Web Design.

Backend: ASP.NET Core, Web API, RESTful API Design, Entity Framework Core, JWT Authentication, Clean Architecture.

AI & RAG: RAG, Prompt Engineering, Semantic Search, LLM Integration, Agent Framework.

Database: SQL Server, PostgreSQL, Entity Framework Core, Qdrant, Vector Databases.

DevOps & Tools: Azure, Docker, Docker Compose, Git, GitHub, GitHub Actions, CI/CD, Visual Studio, VS Code, Postman.

OtherSkills: System Design, Scalable Architecture, RBAC, API Integration, Team Collaboration, Jira.

Interests: .NET, System Architecture, Cloud, AI, Application Security, Performance Optimization.

Project Experience

Independent Software Developer | Project-Based Development — Oct 2023 – Present

- **Build and maintain** full-stack applications using Angular, ASP.NET Core, C#, Entity Framework Core and SQL Server, from API and database design through frontend implementation.
- Implement authentication and authorization patterns, including JWT-based authentication and role-based access control.
- Develop responsive interfaces, integrate relational databases, and use Git/GitHub to manage source code and project changes.
- Explore AI-enabled application features using RAG, vector databases, semantic retrieval and LLM integrations.

BusinessOS — AI-Powered ERP | Angular, .NET, SQL Server, Bootstrap, RAG, AI, JWT — **February 2026**

- Developing a multi-tenant business management platform for workflows including inventory, sales, customers and business analytics.
- Designed modular backend functionality using Clean Architecture and CQRS, implemented REST APIs with tenant-scoped access and JWT authentication.
- Integrated AI knowledge retrieval using RAG and Qdrant to support contextual search and question answering over business information.

ProdFalcon — AI-Powered Code Security Analyzer | Angular, .NET Core, SQL Server, JWT — **August 2026**

- Built a platform that analyzes uploaded ZIP projects and GitHub repositories for potential vulnerabilities, exposed secrets and insecure coding patterns.
- Implemented rule-based checks for issues such as SQL injection risks and hardcoded secrets, with AI-assisted remediation suggestions

ExamDynamics — Exam Preparation Platform | Angular, .NET, SQL Server, RAG, AI, JWT — **February 2026**

- Developed a full-stack platform for students to practise exams, attempt quizzes and review performance analytics.
- Implemented JWT authentication, role-based access control and SQL Server data access using Entity Framework Core Code First.

Education

BS Computer Science — **Graduating in Jun 2027**
University of Agriculture, Faisalabad (UAF) — **2023 – 2027 (Expected)**

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Management Systems (DBMS), Software Engineering, Operating Systems, Web Development, and Software Architecture.

Technical Activities & Interests: Competitive Programming and LeetCode Problem Solving, Technical Research, System Design, AI Engineering, Emerging Technologies, and Continuous Learning in Software Development.

Technical Activities & Professional Development

Practicing Data Structures & Algorithms in C# and solving coding challenges on LeetCode and GeeksforGeeks.

Technical Research:Exploring .NET technologies, ASP.NET Core, Angular, AI integration, and emerging development tools..

AI & Innovation: Exploring Generative AI, Retrieval-Augmented Generation (RAG), Vector Databases, and AI-powered application development.

Independent Development: Building full-stack applications, multi-tenant SaaS solutions, and AI-integrated software projects.
